Monmouth College Campus Highlights:

Center for Science & Business: Our $42 million Center for Science and Business, completed in 2013, continues to facilitate discussion and collaboration among students and faculty from a wide variety of disciplines, including math, the sciences, economics, accounting and business. The three-story building features 14 research labs, including high-performance parallel computing, nuclear physics, nutrition, ecology, psychology and anatomy. It also includes tax preparation rooms, an astronomical observatory, a cadaver lab and a greenhouse. This past summer, students used the labs to conduct their own research; one chemistry major conducted research on essential oils that are used to heal chronic wounds. The Trubeck Telescope, a recent addition, can gather about 10,000 times more light than an unaided human eye and allows students and faculty to observe stars and galaxies that are trillions of miles away.

The Triads: Monmouth continues its dedication to interdisciplinary study by adding the second Triad, Global Public Health. Both triads, Global Public Health and Global Food Security are now minor fields of study. Triads bring together three seemingly unrelated academic disciplines to focus on issues of social importance an to bring more depth and breadth to their study.

Educational Garden And Farm: Our Educational Garden & Farm allows students to get involved in sustainable and organic food production right on campus. Our six-acre farm is used to cultivate a variety of crops, while our garden serves as both an educational and outreach facility.

Expanded Athletics Department: 2016-2017 was the inaugural season for Monmouth's newest varsity programs, men's and women's Lacrosse. These additions bring our varsity athletics count to 24, including men's and women's water polo, which was elevated to varsity status in 2013. As a part of the NCAA DIII Midwest Conference, Fighting Scots are competing at a high level both on the field and in the classroom.

$20 Million Commitment: Monmouth recently received its largest gift in college history. This $20 million commitment will be used to expand the college's endowment.

Unique Academic Opportunities at Monmouth College:

- SOFIA – Summer Opportunities for Intellectual Activity – Selected incoming students are given an opportunity to participate in research and creative projects (stipend included).
- More than 50 off-campus study opportunities.
- Passport Program provides all new incoming students with a free US passport, as well as assistance in completing the necessary paperwork.
